Personal Profile

Game Developer with professional studio experience building real-time gameplay systems, event-driven architectures and AI-driven interactions in Unreal Engine 5. Shipped a complete playable prototype and contributed to a studio game project end-to-end. Skilled at translating complex design logic into modular, performant, and testable systems with strong interest in large-scale simulation and emergent gameplay.

Skills

Programming Languages: C++, C#, Python, object-oriented design, data structures, modular architecture
Game Development: Unreal Engine 5, Blueprints, Gameplay Systems Design, Prototyping, Game loop architecture
Systems and Simulation: Event-driven systems, Finite State machines, AI Behaviour Trees, procedural logic, Emergent Systems, Iterative testing
Software Engineering: Object-Oriented Programming, Data Structures, Debugging, Modular design
Tools and Technologies: Git, GitHub, VS Code, Docker, Agile workflows, performance profiling, debugging

Work Experience

Software Engineer Intern (Backend and Data Systems) Jan 2026 – Present
Sharelog Techguide Pvt. Ltd., Pune, India

- Developed **Python**-based backend systems and data pipelines, improving data processing efficiency by **20%**.
- Applied structured debugging and optimisation techniques to improve system performance and reliability.
- Worked with real-time data systems supporting analytics workflows and monitoring.

Game Developer (Collaboration) Oct 2024 – Oct 2025
SKY3D Studio, Mumbai, India

- Developed a playable game in **Unreal Engine 5 Blueprints**, implementing **15+ modular gameplay systems**, including input handling, interaction logic, state-based mechanics, and event sequencing.
- Designed event-driven gameplay architecture that improved system stability and reduced interaction bugs by **30%** through structured, testable component design.
- Built **AI-driven trigger and behaviour systems** modelling dynamic, reactive responses to player actions, contributing to emergent, simulation-aware gameplay.
- Collaborated with designers and engineers in a professional studio pipeline, contributing to sprint planning, system reviews, and iterative delivery of gameplay features.

Software Engineer Intern Aug 2023 – Apr 2024
SKY3D Studio, Mumbai, India

- Maintained backend services for a production website with **10+ service pages**, ensuring **99.9% uptime**.
- Implemented backend request handling pipelines processing **1,000+ monthly user enquiries**.
- Collaborated with stakeholders to resolve **50+ technical issues** and deliver features within 2-week Agile cycles.

Projects

Horror Game – Unreal Engine Project (Ongoing)

- Designed and implemented event-driven gameplay systems with state-based logic and player interaction handling.
- Built systems where player actions dynamically influence outcomes, simulating reactive environments.
- Implemented AI-driven triggers and behaviour systems to model interactive responses.
- Focused on performance optimisation and debugging complex interaction flows.

Maya: The Golden Curse – Playable Game Prototype 2025
[Gameplay Trailer](#) | [Playable Build](#)

- Developed a complete gameplay prototype, including input handling, interaction logic, and event sequencing.
- Structured gameplay flow using modular, state-driven systems.
- Iteratively tested and refined systems to ensure stable and predictable outcomes.

Education

MSc in Computer Science July 2024 – June 2026
MIT World Peace University, Pune CGPA: 8.10 / 10

BSc in Computer Science July 2020 – Aug 2023
Nowrosjee Wadia College, Pune CGPA: 7.36 / 10

Certifications

Foundations of AI and Machine Learning Microsoft – Apr 2026
Credential ID: UC4UF48TU6XU | [View Certificate](#)

Full Stack Web Development Amazon – Oct 2025
Credential ID: IA6C3K15RG6L | [View Certificate](#)
